

We Are Ready For The Challenge Of the Pharoos

The whole secondary school initiative for the Challenge of the Pharoos is "The Green Club." The Green Club is dedicated to raising awareness about recycling among teachers and students, embodying our school vision: Be yourself, Inspire others, Seek challenges, and Make a positive change. We collect recyclable waste from teachers' classrooms every Monday and Wednesday during lunch. Also, we would like to remind students to use the bins in the quad during breaks. We've launched an urban garden initiative by Gate 5, where we've planted fruit trees and vegetable shrubs. Students actively participate in planting and occasionally water the plants. Our efforts aim to create a secure, valued, and accepting environment that fosters growth and learning. We have many future plans to reduce our carbon footprint, including a recycling game that awards points, and using produce from our garden to make salads and smoothies for sale at school, promoting organic, healthy eating. Through these initiatives, we strive to build a sustainable community for everyone.

Challenge Of The Pharaohs In Primary

The children in primary have been taking part in the Challenge of the Pharaohs. The challenge this year was to Think of Just 1 Thing that they can change in their daily life at home, in school or in the wider community that will make a difference to Life Below Water or Life on Land. The year 4 and 5 classes decided to focus on the amount of paper that goes to waste at BISM. All children worked extremely hard collecting data and analysing to show how we could improve our awareness of paper usage to cut down on carbon emissions and deforestation. The children were looking at the school as a whole and interviewed Mr. Ghassan about paper usage in the school and discussed the importance of reducing our paper usage at BISM.

All children have thoroughly enjoyed participating in this year's Challenge of the Pharaohs and enjoyed having class discussions and finding ways to change their lifestyles. We look forward to next year's challenge and thinking of new ways we can improve on our sustainability and ways to be a greener school

Kutubee Interactive Reading Platform

We strongly believe in the importance of improving Arabic interactive reading skills, which is why we have started using the KUTUBEE interactive reading platform. This innovative tool aims to encourage students to read in correct and standard Arabic through engaging, interactive stories that are both readable and audible. After completing each story, students are challenged with questions designed to check their understanding and reinforce their learning.

We are thrilled to congratulate those students who have actively used the platform and managed to read the most. Their dedication and effort are commendable.

We also want to encourage all students to participate positively, as reading opens the door to a wonderful world that seamlessly merges fiction and reality.

By diving into this interesting world through reading, we not only enhance our language skills but also enrich our imaginations and knowledge. Let's all embark on this exciting journey together by **READING!**
